PROFILE

Software developer with over three years of shipping production web applications. Currently at Enjaz, Qi Card's technology arm, building Vue 3 and TypeScript systems for Iraq's oil sector and Svelte mini apps for the SuperQi super app. Full-stack background in React, Next.js, Node.js and PostgreSQL, including deploying and running my own servers.

EXPERIENCE

Software Developer — Enjaz (International Smart Card 'Qi Card') · Full-time — Jul 2025 - Present

- Delivered Oil Coupon, used by over one million Iraqi families to collect their kerosene and LPG allocations: built the admin dashboard and the citizen mini app inside SuperQi (Svelte 5, SvelteKit).
- Made government oil-sector platforms for fuel cards and warehouse operations faster and more reliable for thousands of daily users across Iraq, by rewriting legacy modules in Vue 3 + TypeScript (Pinia, PrimeVue, Vuetify) and fixing high-priority bugs and performance issues.
- Shipped Arabic-first, right-to-left interfaces in close collaboration with .NET back-end, QA and product teams.

Freelance Software Developer — Self-employed — Mar 2024 - Present

- Streamlined ordering for cafes, including a board-game cafe and a cybercafe, with digital menus that make browsing and ordering easier for customers.
- Organised a clinic's client management by setting up Zoho CRM.
- Launched a portfolio website that showcases a photographer's work online.

Junior Software Developer — Alrabiaa TV · Part-time — Feb 2025 - Jun 2025

- Launched an event ticketing platform where customers book seats on interactive seat maps (Seats.io), with an admin dashboard for managing events.
- Kept venue seating accurate by designing the data model and a Node.js/Express API that syncs charts, zones and seats with Seats.io.

Junior Software Developer — PureTik · Full-time — Jun 2024 - Jun 2025

- Delivered Dr.Lab, a desktop app (Electron) for running medical labs, as main developer, with a serial-key licensing API and barcode label printing; also built drNote, a clinic notes app.
- Launched Karada Store (karadastore.iq), a multi-vendor e-commerce platform where customers pay in Qi Card installments and sign in with WhatsApp OTP, with shipping integration (Next.js, Express, Prisma, PostgreSQL).
- Kept production services running on self-managed VPSs (Nginx, PM2, PostgreSQL, Certbot, S3-compatible storage).

Assistant Trainer — Aon.iq · Part-time — Oct 2024 - Dec 2024

- Kept students on track in a front-end development course by supporting the lead trainer in lectures, running daily progress meetings, helping debug code, and tracking scores and attendance.

Front-End & UI Design Intern — Makers of Baghdad — Jul 2023 - Aug 2023

- Gave the IoT KIDS website a cleaner, faster experience by redesigning it in Figma, rebuilding it from scratch in React and Bootstrap, and running QA and performance checks.

EDUCATION

BSc Computer Science, Artificial Intelligence — University of Technology, Baghdad — Fall 2020 - Spring 2024

- Graduation project: age estimation from face images using Support Vector Machines (Python, OpenCV, FG-NET dataset).

Full-Stack Web Development Bootcamp — Aon.iq — Oct 2023 - Feb 2024

- Intensive in-person programme from HTML, CSS and JavaScript to React, Next.js, Node.js and Express.

SKILLS

Front end	TypeScript, JavaScript, Vue 3, Pinia, PrimeVue, Vuetify, Nuxt, React, Next.js, Svelte 5, SvelteKit, Tailwind CSS, Ant Design
Back end	Node.js, Express, Prisma, PostgreSQL, SQLite, REST APIs, Python
Tools	Git, Linux systems, Arch Linux, Nginx, PM2, Electron, Figma, Jira, Postman
Languages	Arabic (native), English (fluent)
